

(a) Apparent Cloud-Point Shift (T_{cloud}^{app})
(binodal-crossing condition solved by Brent's method)

(b) Condensate Wetting Angle $\theta_c(T)$
(Young's Eq. with Monte Carlo 95% CI)

(c) Model-Predicted Lag Time τ_{lag}
(Threshold: $0.10 \cdot M_{control}$)

(d) Fibrillation Reduction M_{final}
